

Project Information Page

I Melanie Vasquez will be graduating soon and my goal after i graduate is to open my own car lot, so when you told us we could design a website, I immediatly saw the oppurtunity to put my web skills to work and design a website for the car lot I want to open one day. I confirmed my idea with my group and they were ok with it. So after discussing the theme me and my group divided the pages up and we each worked on a individual page.

The internet is a grerat way for a car lot to advertise there business. Three objectives that I want our website to have is:

1. Financing options for the customers
2. Contact information
3. Our mission statement/ about us

The software that we will be using when designing the website is adobe illustrator and dreamweaver. I have experience in both these softwares. I was taught in previous classes for designing web pages to use these two softwares for designing websites. The first thing me and my group will do is do some sketches of what we want the page to look like, then we will decide on what image we want to use as a hyperlink, and what text we want to use as hyperlinks, also what kind of meshup we will want to use. Then we will begin the project starting off with illustrator.
