MIS 101 – FALL 2022
GROUP PROJECT
Crystal Yang, Davis Tran, Erik Gralian,
Hue Man Huynh, James Gilliam

Summary Report: Student Records

Our group project is focus on the student information, majors, and department information. The purpose for this project is for administrative staff to manage and design the classes demand based on student majors and studying levels so that the admin staff can contact the instructors to schedule more classes to provide enough rooms for students to enroll in the next semester and ensure that students can graduate according their plans. Also, our project provides the information of student majors and classes to support the statistic of students in different majors in order to help the admin staff can design and organize the Career Fair, Internship, or Job Fair event for students to attendance and gain experiences. We started with the basic ideas for the data is student information; such as last name, first name, student ID, student level, majors, email address, phone number, date of birth, and contact address. Next, we focus on the major department information with professor name, contact email, phone, and classes. Based on this information we have on hand; we create more different related tables in order to support our ideas and purpose of the project. We try to make our project simply for either admin staff or student assistant to easy to use and pull out the information. We hope that our project can contribute small things to support the admin staff to run the work. Thank you!
