Database Summary

My group and I created a database on Microsoft Access for our tire shop business. On Microsoft access we were able to track orders, track customers and track time clock for the employees. Microsoft Access provides efficient tracking information. On the database we set up different report tables for time clock, invoices, and employee info. For the invoices we build a table to hold our order information first. The customer ID was our auto number which created a related field for our table relationship. Overall, access was a great tool to track for our tire shop business.
